## **In the former Dallas Museum of Natural History building**

This two-story historic 1936 Art Deco style building features a sweeping grand staircase and lushly planted outdoor amphitheater. The interior limestone walls feature thousands of shell fossils. The first and second floors are virtually windowless, which maximizes the amount of available wall space.

The first floor of the Museum consists of four native Texas Wildlife habitat halls, which can be used separately or in conjunction with the reception area. At the top of the grand staircase is another lobby and reception area. The second floor showcases "Prehistoric Texas", the Museum's permanent display of fossils. The Auditorium is located on the second floor, the auditorium is equipped with a VCR, DVD slide projectors, a computer, 20-foot wall screen, podium, microphone and surround sound system.

The Outdoor Venue is located adjacent to the lower level of the Museum and planted with native flowers and trees; the two-tiered amphitheater is perfect for outdoor picnics and cultural arts performances.
